Never	38%
Once in a while	50%
Every 1-2 months	9%
Very frequently	3%

Three category signals

Accessories lead overall: 26 / 62 buyers (41.9%).

Female buyers lean toward jewellery: 13 / 30 (43.3%).

Male buyers lean toward accessories: 15 / 32 (46.9%), then health & fitness (37.5%).

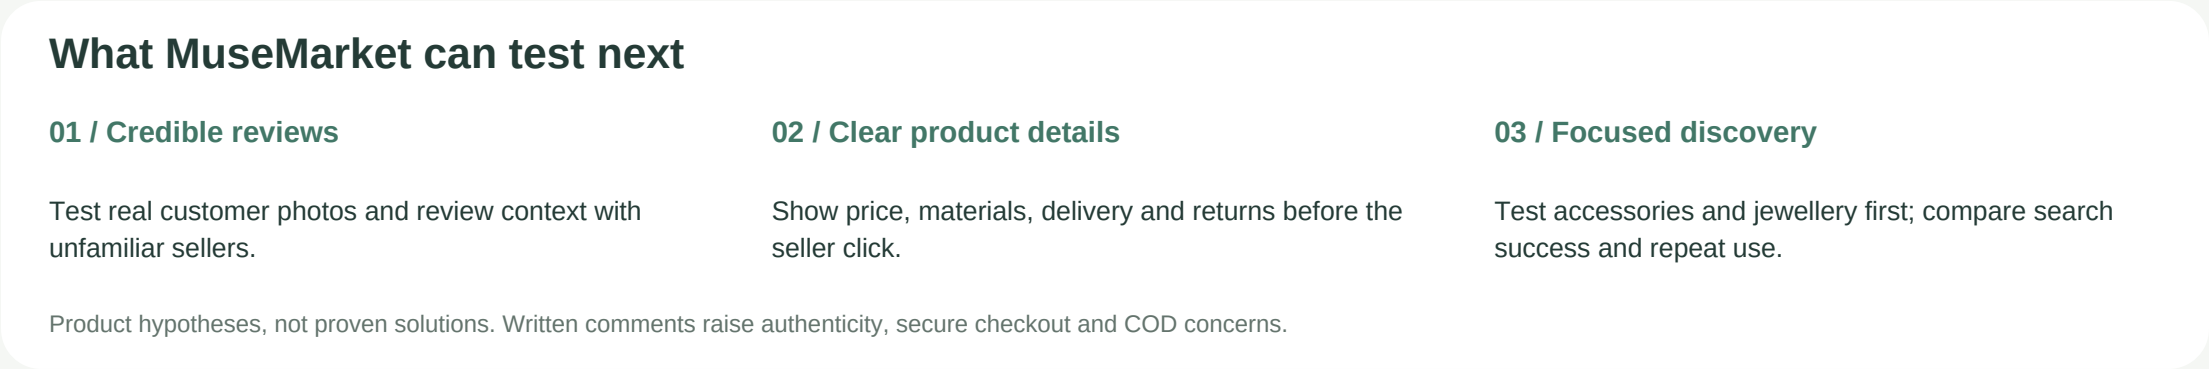

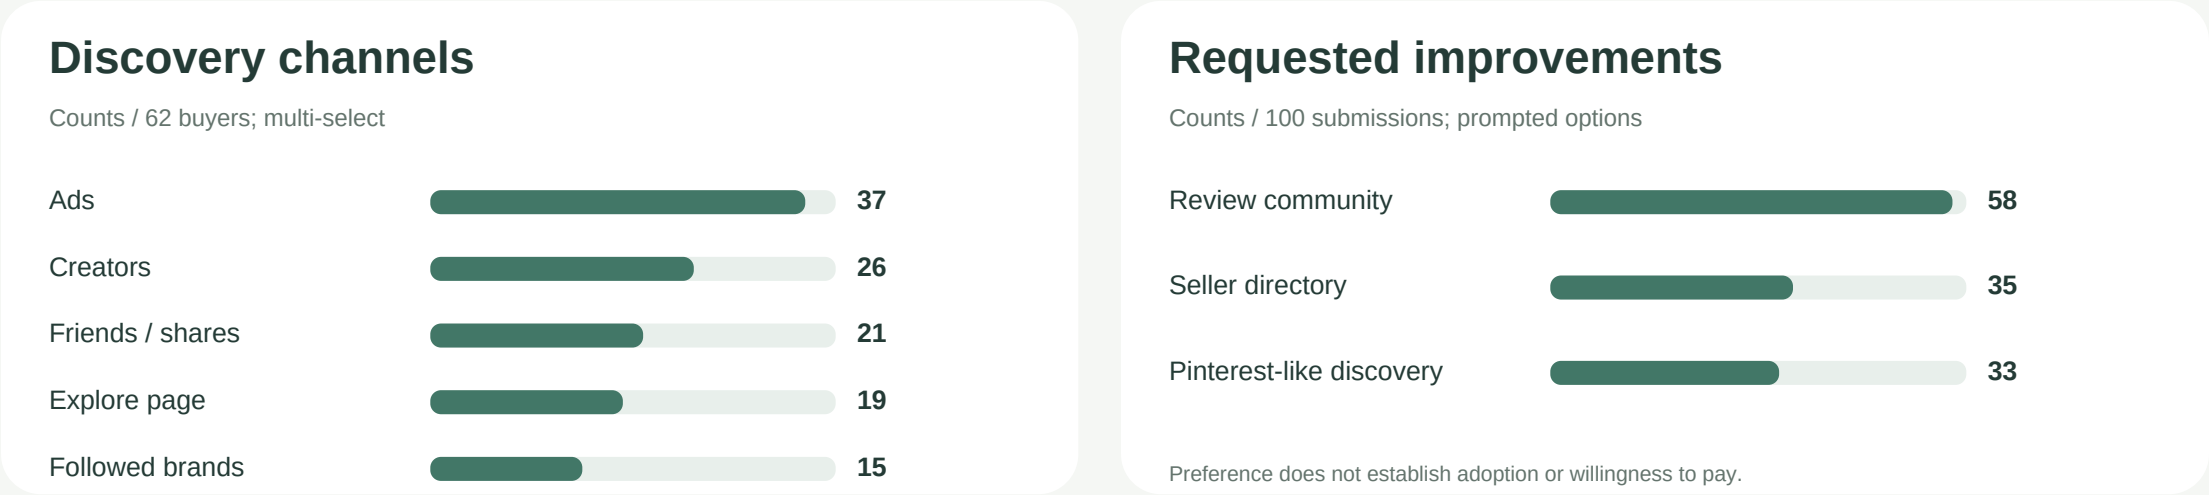

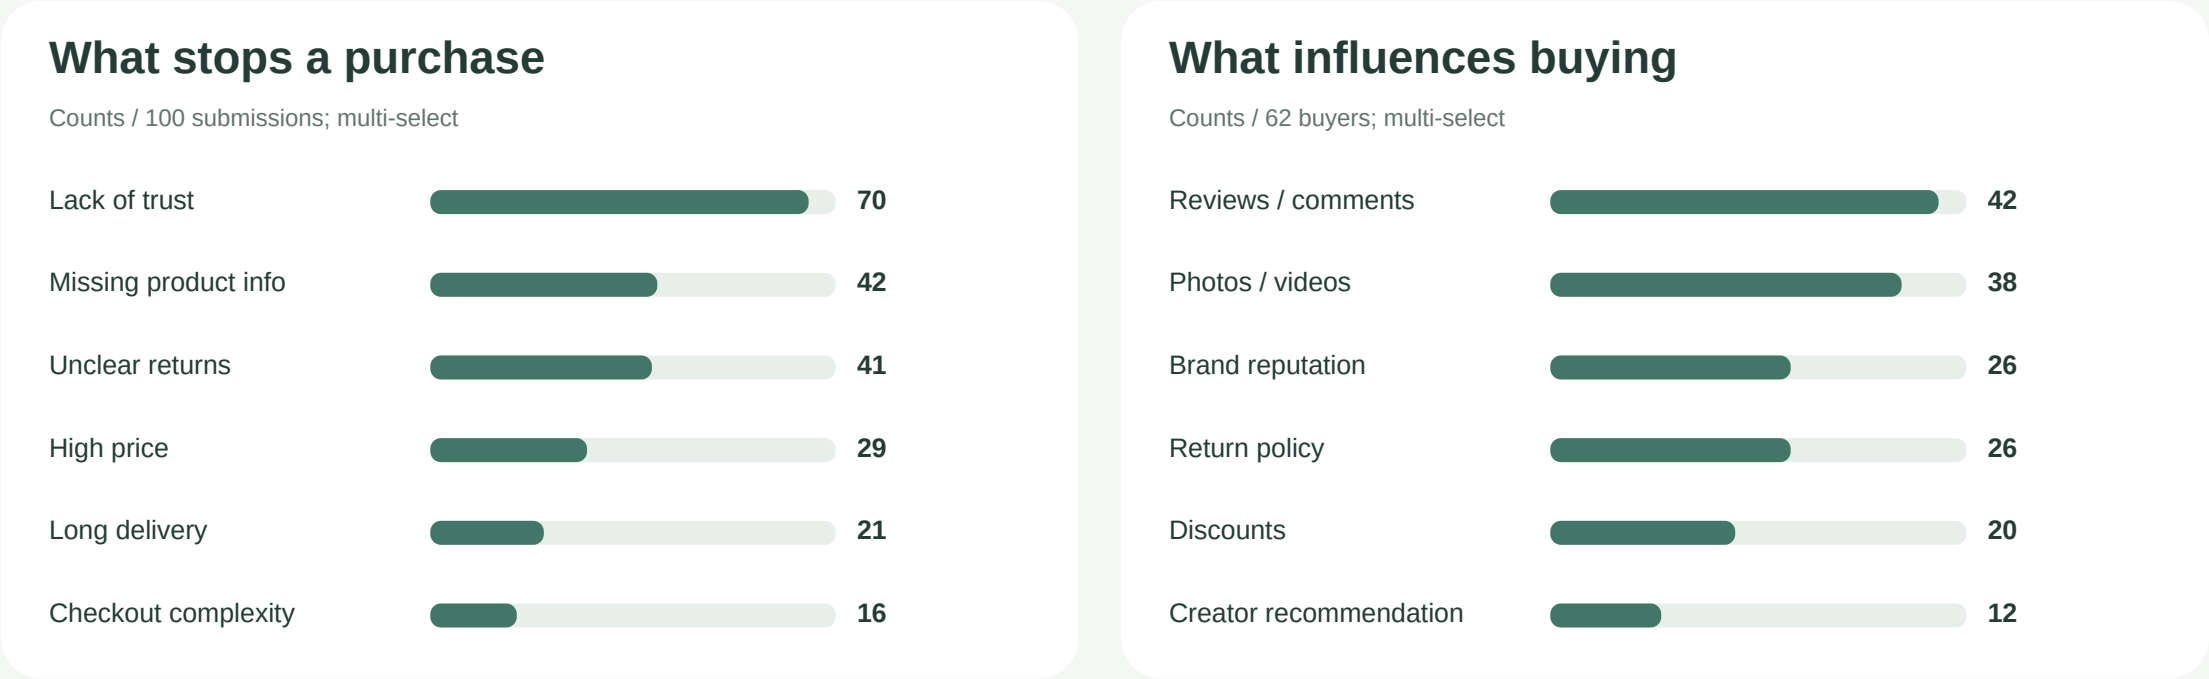

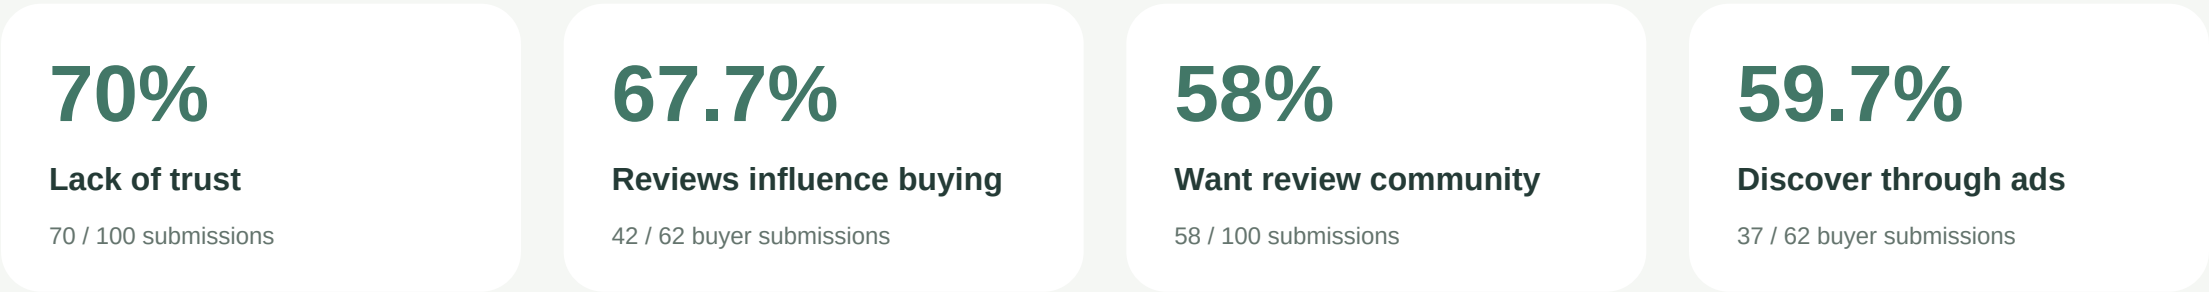

Read the numbers correctly

Categories count buyer submissions mentioning a product type, not orders or spending. Multiple selections are allowed. Accessories include phone covers, keychains and headbands. One "never" response also selected accessories: excluded here (raw count 27; buyer count 26). Purchases may be gifts; the survey does not ask who uses them.

Sample: 39 aged 18-25, 52 aged 25-34, 9 aged 35-45. Age bands overlap at 25. Self-selected survey; results describe this sample, not the wider market.

What drives the decision

Trust, reviews and product information are recurring signals

Method: 100 unique submission IDs; 94 distinct respondent IDs. Two IDs repeat with conflicting demographics, so main results count submissions. Keeping only first or last rows per ID leaves trust at 64/94 (68.1%) and review-community preference at 52/94 (55.3%). Buyers select a frequency other than "never". City is blank in 34 submissions.

Limits: Exploratory self-report; not representative. Instagram discovery may lead to checkout elsewhere and includes established retailers. No spending, willingness-to-pay or adoption data. Source: Instagram Shopping Research_Submissions_2026-10-01-2.csv. No individual identifiers are published.
